Washington DC 20460

6

Dear Mr. Reilly:

While attending a meeting of the American Legislative Exchange Council, I learned of a new product, which I believe could play a major role in improving our nation's air quality.

The product, HITEC 3000, which is developed by the Ethyl Corporation, is currently pending review within the Environmental Protection Agency. It is my understanding that Ethyl filed a fuel additive waiver on May 10 and that the Environmental Protection Agency will make a decision on the matter by November 5.

Ethyl Corporation is a Fortune 500 company located in Richmond, Virginia. They have tested the product a number of years in an attempt to evaluate its potential. The company is convinced that HITEC 3000 will indeed improve ambient air quality by reducing automobile emissions.

I hope EPA will give this product every consideration.

Sincerely,

PERRY O. HOOPER, JR.
